DETAILED ACTION

Page 2

Response to Arguments

1. Applicant's arguments with respect to claims 1 and 2 have been considered but are most in view of the new grounds of rejection.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 3. Claims 1 and 2 are rejected under 35 U.S.C. 102(e) as being anticipated by Challa et al. (Challa), U.S. Patent No. 6,453,181, used in the previous office action

Regarding claim 1, Challar discloses an adaptive method for reducing power consumption in a standby mode of a digital radio communication terminal, comprising the steps of:

calculating the difference of edge timings between a main clock and a low frequency clock (reads on estimated dynamic frequency error compensation factor representative of a difference between the initial frequency and a current dynamic frequency of the slow frequency clock signal) (col. 4,lines 16-35);

comparing the calculated timing difference with a predetermined difference reference value (reads on fixed frequency drift compensation factor) (see col. 4,lines 24-45); and

upgrading or downgrading a catnap period according to a result of said comparing step (col. 6,lines 10-14).

Regarding claim 2, Challa discloses steps (A) through (C), as applied in claim 1 above. Challa further disclose the following steps: (D) comparing the upgraded or downgraded catnap (i.e., reads on number of cycles in current cat nap) period calculation variable with predetermined maximum and minimum critical values (i.e., reads on predetermined values representative of the length, e.g., length inherently includes a range, i.e., maximum and minimum values) (see col. 6,lines 10-15); and (E) shortening or lengthening the catnap period according to a result of step (D) (i.e., reads on the fact that length of catnap is determined based on predetermined values) (see col. 6,lines 10-15).

Allowable Subject Matter

4. Claim 3 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Joy K Contee whose telephone number is 703-308-

Art Unit: 2686

0149. The examiner can normally be reached on M (alternating), T & Th, 5:30 a.m. to 2:00 p.m.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Marsha Banks-Harold can be reached on 703-305-4379. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
